

How to Use the iNaturalist App – Step by Step

Download the
iNaturalist app

Project Gotland
Marin BioBlitz

1. Download the app – Scan the QR code or go to App Store (iPhone) or Google Play (Android).

2. Create an account – Open the app and register.

3. Join the project "Gotland Marin BioBlitz"

In order for an observation to be included in a project on iNaturalist, you sometimes need to be a member and add it manually.

In some projects, this happens automatically if the observation meets the project's criteria.

4. Make an observation

Select "Observe" in the app. Take a photo directly in the app or upload an image from your phone. The app will suggest species using image recognition. Choose the suggestion that seems accurate, or skip this step if you're unsure.

5. Add location

The app automatically adds the location if you allow location access.

If you do not allow this, you can manually select the location by searching for the location on the map.

6. Save and upload

Click "Share" or "Upload". Your observation will be shared with the iNaturalist community.
